

Otter Eggs Michigan Fall Steelhead

Manistee River Tippy Dam – Wellston, MI

Fall steelhead fishing in Michigan is all about the egg. Now don't get me wrong, we hook fish swinging streamers, and drifting nymphs as well, but not like the Otter Egg!

Fall steelhead follow the chinook and coho salmon up the river to feed on the roe that drifts from spawning activities from the salmon. Seeing large groups of salmon spawning and bullet shaped silver ghost behind them is what fishing in the fall in Michigan is all about. The fall steelhead are very aggressive and feed heavy on chinook and coho eggs.

When fall fish first show up, it seems like any egg pattern will work. Some anglers use yarn, beads, and flies that look like eggs. These type of egg patterns work great until the fish have all been hooked! The use of painted beads has become popular, but fish spit the bead quickly, and the beads get chipped easy being in a box. Otter Eggs are the best imitation of an egg there is! When fish are feeding on eggs and have become educated, The Otter has the cure!

Field Report

Walt,

The Otter Eggs have been working great for fall steelhead! I have been fishing the opaque and sparkle eggs in dirty water or low light, and have been fishing the clear eggs on bright days or clear water. The Tangerine with red speck has been best color. The Michigan Gold color I got when you said to mix Tangerine and Kiwi Opaugue matches the cheese colored egg we like here in Michigan. Thank you again for advice on the Otter Eggs, they have worked great!

Thank you
Jon

Fall steelhead on The Big Manistee River in Michigan. Early October on the Manistee River marks the start of the fall steelhead season. Otter Eggs in natural salmon egg color 8 mm are working well!

Otter Eggs produced even when the fishing pressure was high. When yarn egg flies and painted beads were not working, the Otter Egg still fooled the fish.

Sunny days and low clear water not a problem with the Pegged Otter Egg. This fish was hooked on a 6mm Buff Otter Egg with light orange core pegged above a #12 scud pattern.

Opaque Otter Eggs worked very well early and late in the day. The glow made it easy for the fish to find our egg in low light!

Fall steelhead feeding on salmon eggs. This fish took a Michigan Gold custom color 8mm

Customers were very happy with how the Otter Eggs worked on Fall steelhead.
