

**Walt Mueller, Jr., aka 'The Otter,'** resides in the foothills of the Rockies, close to all the great Rocky Mountain fisheries. When not creating new products, 'The Otter' is in the water testing their effectiveness. But don't just take our word, here's what others are saying:

"Am an avid user of your eggs... They are unbelievable- I do "peg" hard beads and have fished Alaska as well. We just got back from the Clearwater River, ID; my buddy couldn't touch a fish on "pegged" hard beads, and I was crushing them on your Otter's Soft Milking Eggs. I love them! - D. Zignego, Bozeman, MT

"Your eggs have fit the bill with phenomenal days of up to 30 steelhead hookups. My son had the only "bent rod" of all the folks fishing the lower river today, all on the "Michigan Gold" Otter eggs. Another winning color!" J. Kovacic, N.Y.

"I've been fishing steelhead in the Salmon River, N.Y. since 2013...have hooked more fish on Otter Eggs than any other pattern-J. Nealon, MA

"Your egg is the best trout/salmon/steelhead egg I've ever used, bar none ! Could have made a bunch of \$ selling them on the river...other fisherman were offering up to \$5.00 an egg!" G. Jacobsen, NJ

"It was New Year's Day on the Bighorn River, MT-with 4 accomplished anglers- we hooked in

the neighborhood of 200 brown trout -it was unlike anything I've seen and our success was your Otter's Soft Milking Eggs..." L. Graff, MT

"Have to admit, my success using the Embryo Eggs was a surprise for me, and a bigger surprise to my fishing buddies... They will all have a few of these Otter "Embryo Eggs" in their vest for the next outing." C. Moreau, Ontario, Canada

"I'm sure it's a familiar story-I've never had more NY steelhead success than when using Otter's Soft Sucker Spawn, OS-3, Globule pattern..." Jack, N.Y.

"Came back last week from the Eastern Sierras, McFee Creek. Otter Eggs were the ticket again! Thanks for a great product!" R. Mikuriya, CA

1) Steelhead on a Pegged Michigan Gold Otter Egg, Clearwater River, Idaho; 2) Color variations of dying steelhead eggs; 3) Wyoming Brown Trout caught with a 'Kiwi Opaque egg; 4) Walt 'The Otter' with a huge Muskegon River, Michigan, steelhead on April 2018, taken with his 8 mm Embryo Egg; 5) Wyoming Brown Trout caught by 'DJ' Juergensen with an Embryo Egg

Soft Milking Egg Cluster

Soft Milking Egg

**Tied, pegged & globule patterns. Beaded embryo eggs. 20 colors, 7 sizes. Unmatched softness & clarity.**

**"I can't tell the difference. Can you?"**

**Otter's Soft Milking Egg®**

**'Eggxtraordinarily realistic imitation eggs!'**

Pegged Soft Embryo Egg (Salmon with Orange Bead)

▲ 3 x 6 mm Cluster  
Hook: #10 to #6

Soft Embryo Egg (Apricot with Red Bead)

*"Embedded beads, not a 'simulation,' create a strikingly lifelike appearance with big rewards on the water!"*

▲ 4 eggs x 2 mm Soft Sucker Spawn  
Hook: #16 to #12

▲ Soft Spawn Sacks  
Use 4 to 8 eggs in 4, 6, 8, and 10 mm egg sizes per sack

Pegged Soft Embryo Egg with Float Stop (Salmon/Silver Flash with Ruby Bead)

*"Otter's pegged 'Soft Milking Embryo Egg' fly pattern is deadly!"*

## Otter's Soft Milking Egg® products are designed so you can focus on one thing: A great day on the water.

It's the result of an attention to detail and extensive field testing. Our deadly eggs and patterns are available in 7 sizes and 20 colors that realistically mimic the true egg colors for all species of trout and salmon, as well as additional proven 'attractor' variations. Simply superb!

Our soft milking eggs are available in the following sizes:  
**DOUBLE ROW: 2 x 2 mm Soft Sucker Spawn (OS-3)**  
**SINGLE EGGS: 3, 4, 6, 8, and 10 mm**  
**CLUSTER: 3 x 6 mm**

Visit [softmilkingegg.com](http://softmilkingegg.com) for more about how our exclusive product designs make all the difference.

ACTUAL SIZES (IN MILLIMETERS)

▼ 3 mm Single  
Hook: #20 to #16

▲ 6 Eggs x 2 mm Soft Sucker Spawn (OS-3)  
Hook: #14 to #10

4 mm Single  
Hook: #16 to #12

Soft Sucker Spawn 'Globule' Pattern, 4-10 eggs  
Hook: #16 to #10

*"The most realistic soft sucker spawn pattern EVER!"*

▲ 8 mm Single  
Hook: #10 to #6

▲ 6 mm Single  
Hook: #14 to #10

▲ 10 mm Single  
Hook: #8 to #4

*"This high-intensity opaque glow egg produces excellent results in low light. Nothing else even comes close!"*

In 2002, Walt Mueller, Jr., avid fly tier and fisherman of over 65 years, set out to create the most realistic imitation eggs possible. Otter's 'Soft Milking Egg' materials and tied flies are the continuation of his original passion and strict attention to detail. *No other egg patterns have proven more successful on the water, and here's why...*

Meticulously designed to mimic the numerous 'colorations' that occur over the course of an egg's dying cycle, our Soft Eggs are available in 20 of the most natural and attractor colors, and in 7 sizes — all highly effective for salmon, trout and steelhead species.

The glitter and mottling in our transparent Kiwi/Silver Flash, Tangerine/Red Flash, Apricot/Silver Flash, Tango/Silver Flash, Buff/Silver Flash, and Salmon Egg/Silver Flash eggs to the 'glow and opaque' high intensity

colors of Michigan Gold, Apricot Opaque, Kiwi Opaque, Tangerine Opaque, Flamingo and Dead Egg White, all realistically mimic the final color changes of dying, unfertilized eggs. Other transparent colors such as Salmon Egg, Apricot, Ruby, Tangerine, Kiwi, Buff, Robin Egg Blue and Tango mimic normal, fertilized egg color variations.

Natural, lifelike softness ensures that fish hold onto Otter Eggs longer, unlike 'hard' beads. When fish grab they hang on, resulting in more and easier hookups. And our unmatched translucency and opaqueness creates a realistic appearance that fish can't resist!

All tied 'Soft Milking Egg' patterns are topped with an ultra thin, translucent sparkling 'milking veil' — a design so unique that like the Otter Egg it carries registered trademarks. This material effectively mimics the thin,

white veil naturally present as fertilized eggs settle into the gravel bed, or a ruptured egg 'milking' out its contents. Both act as an attractor that produces more strikes.

Otter's unique 'Soft Drift' material produces a more realistic drift & float, similar to natural eggs that settle close to the gravel bottom, softly resting along it and gently moving with the current.

The 'Sparkle Flash' Otter Eggs use a specially developed glitter material that provides substantially increased visibility in off-color and changing water conditions.

Any of Otter's Soft Milking Egg patterns can be tied in just about one minute with a little practice, so you can spend more time fishing!

All Otter 'Embryo Egg' patterns have an internal colored bead that effectively mimics a real

egg, unlike competitors that use a 'simulated' red dot on the outside of their eggs.

The 'OS-3 Soft Sucker Spawn' pattern is a striking reinvention of a popular fly that effectively imitates real sucker eggs abundant from the winter months well into June, excellent for trout and especially Great Lakes steelhead. The 2 mm eggs in double rows can be cut to any length for various hook sizes. *No other product on the market can do this!*

Our new 'Globule Soft Sucker Spawn' pattern has 6 to 10 eggs bunched up to mimic the real sucker eggs that form in small 'sticky' bunches when released from the hen sucker. This new fly pattern is the most realistic sucker spawn pattern available anywhere!

The 'Soft Milking Embryo Egg' and 'pegging system on a leader' are an industry first! The tied fly 'Embryo Egg' patterns are incredibly

effective under selective fishing conditions, especially in frequented and heavily fished areas. Now you can easily peg them by using a moveable 'float stop' positioned underneath the egg above your hook. Otter's pegged eggs are a superior alternative to the hard, hand painted beads used in Alaska and elsewhere. There is nothing else like it on the market!

Incredibly lifelike and reusable, our Otter Egg materials are the perfect alternative to real eggs. Our spawn sacks are durable and will withstand repeated hits by fish, and work well with a drop of scent on the veil or egg sack.

Using Otter Eggs will help prevent the spread of 'VHS (Viral Hemorrhagic Septicemia)' found in the Great Lakes, Pacific, North Atlantic, and North Sea, which affects over 50 species of fish including all trout and salmonoid species. VHS can also be spread by fishermen using

infected fish parts such as eggs, skein, natural roe, egg sacks, bait fish, etc.
